

Beach Profiling and Beach Nourishment

Beach profiling and beach nourishment works are one of the most effective means of maintaining a high-quality beach. In places where a complete redesign and development of the beach is not necessary, beach profiling and nourishment works help to renew the existing sand, widen the beach and change the angle of attack of the sea tides in order reduce the sand loss.

A Unique Product For Prestigious Real Estate Projects

Our unique, new white beach sand is ideal for high standard, prestigious real estate projects in the UAE and elsewhere.

It has been used successfully in the new Beachside Conference Center at Al Hamra Village in Ras Al Khaimah
